DIN HEAD UNITS: If a *surface-mount installation* is desired, insert the **Spacer** into the **Radio Housing**. Slide the DIN cage into the kit and secure by bending the metal locking tabs down. Slide the aftermarket head unit into the cage until secure. (see Fig. A). If an *intermediate-mount installation* is desired, attach the **Snap Spacers** to the outer walls of the radio opening. Slide the DIN cage into the **Radio Housing** and secure by bending the metal locking tabs down. Slide the aftermarket head unit into the cage until secure. (see Fig. B). If a *flush-mount installation* is desired, slide the DIN cage into the **Radio Housing** and secure by bending the metal locking tabs down. Slide the aftermarket head unit into the cage until secure. (see Fig. C)

Locate the factory wiring harness in the dash. Metra recommends using the proper mating adaptor and making connections as shown. (Isolate and individually tape off the ends of any unused wires to prevent electrical short circuit).

Re-connect the battery terminal and test the unit for proper operation. Mount the head unit/kit assembly to the sub-dash with those screws previously removed in the dash disassembly.
